

Research how families access water in Ethiopia:

Is it readily available to them?

Do they have to travel for water?

How is water cleaned and sanitised?

Where do families have access to a bathroom or toilet for washing and going to the toilet?

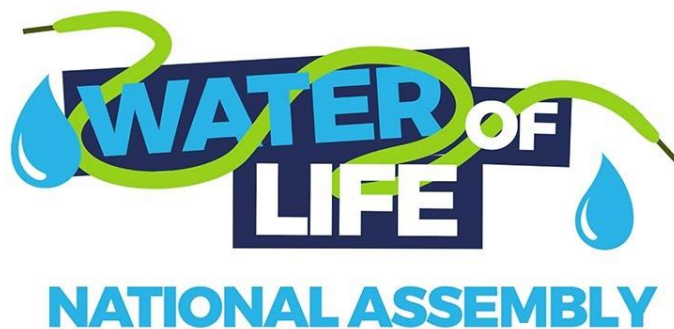

Then compare this to our experiences in the U.K.

Is access to clean water free?

Who is responsible for ensuring that children have access to clean and drinkable water?

You may present your findings as a PowerPoint, a written piece of work, a leaflet, a poster or a drawing with labels.

Please upload finished pieces to Seesaw 😊
